

Demonstration of the `pullquote` LaTeX Package

Nandakumar Chandrasekhar

September 14, 2026

Introduction

This document showcases the features of the `pullquote` LaTeX package. Each example displays the required syntax alongside its rendered output, ensuring visually identical layouts across LaTeX (PDF), Typst (PDF), and HTML formats.

Environment Invocations

In accordance with LaTeX conventions, pullquotes must be instantiated exclusively via the `pullquote` environment.

”Typography is the craft of endowing human language with a durable visual form.” — Robert Bringhurst

Font Sizing

The package provides a sizing scale to adjust the text relative to the document’s base font size. While the filter supports a full 5-step scale (from `s` to `2xl`) alongside custom arbitrary units, the larger sizes below are the most practical for pullquotes. If omitted, it naturally inherits the document’s current font size.

size=m: Medium (Base document size)

size=l: Large

size=xl: Extra Large

size=2xl: Extra Extra Large

24pt: Custom Arbitrary Dimensions

Font Weights and Shapes

The package provides predefined typographic utility attributes.

Font Weights

This paragraph is in bold weight.

Font Styles

By default, pullquotes perfectly inherit the surrounding document's font style. You can override this using the style utilities.

This paragraph is explicitly rendered in italics, overriding the inherited body text style.

Custom Fonts

Because pullquotes are designed to fit seamlessly into your existing layout, they automatically inherit your document's ambient font settings. However, if you want a specific quote to visually break away from the body text, you can override it using the **font** attribute. The package natively wraps this in a **\fontspec** call.

This pullquote overrides the document defaults and explicitly uses the Georgia font.

Colors

This section describes how to apply colors to the pullquote text and its decorative left border.

Basic Color Attributes

This quote uses the SVG named color **CadetBlue** for text and the pastel **Thistle** for the border.

Hex Codes

This quote uses raw Hex codes: **#827397** for text and the shorthand **#FAA** (Soft Coral) for the bar.

Color Mixing

The package supports LaTeX's **xcolor** percentage-mixing syntax.

This quote uses a three-part blend for the text (**Indigo mixed at 90% with Black**) and a standard two-part blend with white for the bar.

Box Padding and Borders

The **paddingleft** attribute controls the gap between the bar and the quote text, independent of the bar's own thickness.

This quote widens the gap between the bar and the text using **paddingleft=1.5em**, independent of the 0.5em bar thickness.

The remaining three sides — **paddingright**, **paddingtop**, and **paddingbottom** — can each be tuned independently of **paddingleft**, giving full control over the box's inner spacing.

This quote sets an even 1em of padding on every side, giving the text room to breathe on all edges rather than just next to the bar.

Block-Level Positioning and Width

By adjusting **width** and **boxalign**, you can set the width of the pullquote and position the entire block to the left, center, or right of the page.

This quote takes up 45% of the page width and is aligned flush to the right margin.

Inner Text Alignment

The `textalign` attribute controls text alignment *within* the box.

This quote takes up 70% of the page and is aligned to the left margin, but the text *inside* the box is centered.

Interline Spacing (Line-Height)

Because `pullquote.sty` delegates semantic spacing translations to Pandoc, standalone usage requires passing the raw baseline multiplier directly to the `skip` attribute.

This quote uses a `skip` value of 1.8, acting as a double-spacing multiplier to let the text breathe.

Tightening works the same way by using a lower multiplier:

This quote is deliberately set to 1.2, making it ideal for dense, heavily styled multi-line blocks.

Global Metadata Configuration

You can establish project-wide defaults for your pullquotes using `\pullquotesetup`.

This quote has no inline attributes. It inherits its styling entirely from the setup declaration defined at the top of this document.

Combining Multiple Attributes

Every key composes independently to create highly customized layouts:

"Typography is the detail and the presentation of a story. It represents the voice of an atmosphere, or historical setting of some kind. It can do a lot of things."

— Cyrus Highsmith
